Basic React – Exercise 1 – Create tinder "pha ke" app

Basic React – Exercise 1 – Create tinder "pha ke" app – Front End – app.js and Header

```
import './App.css';
import DatingCards from './components/DatingCards';
import Header from './components/Header';
import SwipeButtons from './components/SwipeButtons';
```

```
function App() {
  return (
    <div className="app">
      <Header />
      <DatingCards />
      <SwipeButtons />
    </div>
  );
}
```

```
export default App;
```

```
import React from 'react'
import './Header.css'
import PersonIcon from '@material-ui/icons/Person'
import IconButton from '@material-ui/core/IconButton'
import ForumIcon from '@material-ui/icons/Forum'
```

```
const Header = () => {
  return (
    <div className="header">
      <IconButton>
        <PersonIcon fontSize="large" className="header__icon" />
      </IconButton>
      
      <IconButton>
        <ForumIcon fontSize="large" className="header__icon" />
      </IconButton>
    </div>
  )
}
```

```
export default Header
```

Basic React – Exercise 1 – Create tinder "pha ke" app – Front End - DatingCard

```
import React, { useState, useEffect } from 'react'
import DatingCard from 'react-tinder-card'
import './DatingCards.css'
import axios from './axios'

const DatingCards = () => {
  const [people, setPeople] = useState([])

  useEffect(() => {
    async function fetchData() {
      const req = await axios.get("/dating/cards")
      setPeople(req.data)
    }
    fetchData()
  }, [])

  const swiped = (direction, nameToDelete) => {
    console.log("receiving " + nameToDelete)
  }

  const outOfFrame = (name) => {
    console.log(name + " left the screen!!")
  }

  return (
    <div className="datingCards">
      <div className="datingCards__container">
        {people.map((person) => (
          <DatingCard
            className="swipe"
            key={person.name}
            preventSwipe={['up', 'down']}
            onSwipe={dir => swiped(dir, person.name)}
            onCardLeftScreen={() => outOfFrame(person.name)}
          >
            <div style={{ backgroundImage: `url(${person.imgUrl})`} className=
              <h3>{person.name}</h3>
            </div>
          </DatingCard>
        ))}
      </div>
    </div>
  )
}
```

```
    </DatingCard>
  )}
</div>
</div>
}

export default DatingCards
```

Basic React – Exercise 1 – Create tinder "pha ke" app – Front End – Swipe Button

```
import React from 'react'
import './SwipeButtons.css'
import ReplayIcon from '@material-ui/icons/Replay'
import CloseIcon from '@material-ui/icons/Close'
import StarRateIcon from '@material-ui/icons/StarRate'
import FavoriteIcon from '@material-ui/icons/Favorite'
import FlashOnIcon from '@material-ui/icons/FlashOn'
import IconButton from '@material-ui/core/IconButton'

const SwipeButtons = () => {
  return (
    <div className="swipeButtons">
      <IconButton className="swipeButtons_repeat">
        <ReplayIcon fontSize="large" />
      </IconButton>
      <IconButton className="swipeButtons_left">
        <CloseIcon fontSize="large" />
      </IconButton>
      <IconButton className="swipeButtons_star">
        <StarRateIcon fontSize="large" />
      </IconButton>
      <IconButton className="swipeButtons_right">
        <FavoriteIcon fontSize="large" />
      </IconButton>
      <IconButton className="swipeButtons_lightning">
        <FlashOnIcon fontSize="large" />
      </IconButton>
    </div>
  )
}

export default SwipeButtons
```

Basic React – Exercise 1 – Create tinder "pha ke" app – Front End – Connect to BE

```
import axios from 'axios'

const instance = axios.create({
  |   baseURL: "YourBackendURL"
  | })

export default instance
```

Basic React – Exercise 1 – Create tinder "pha ke" app – Back end

- Set up firebase
- Set up mongoDB
 - `npm i express mongoose`
 - `npm i nodemon`

Basic React – Exercise 1 – Create tinder "pha ke" app – Backend – database card schema

```
import mongoose from 'mongoose'

const cardSchema = mongoose.Schema({
  name: String,
  imgUrl: String
})

export default mongoose.model('cards', cardSchema)
```

Basic React – Exercise 1 – Create tinder "pha ke" app – Backend – Server

```
import express from 'express'
import mongoose from 'mongoose'
import Cors from 'cors'
import Cards from './dbCards.js'

//App Config
const app = express()
const port = process.env.PORT || 8001
const connection_url = 'mongodb+srv://admin:your_password@cluster0.lggjc.mongodb.net/datingDB?retryW

//Middleware
app.use(express.json())
app.use(Cors())

//DB Config
mongoose.connect(connection_url, {
  useNewUrlParser: true,
  useCreateIndex: true,
  useUnifiedTopology: true
})
```

Basic React – Exercise 1 – Create tinder "pha ke" app – Backend – Server

```
//API Endpoints
app.get("/", (req, res) => res.status(200).send("Hello TheWebDev"))

app.post('/dating/cards', (req, res) => {
  const dbCard = req.body
  Cards.create(dbCard, (err, data) => {
    if(err) {
      res.status(500).send(err)
    } else {
      res.status(201).send(data)
    }
  })
})

app.get('/dating/cards', (req, res) => {
  Cards.find((err, data) => {
    if(err) {
      res.status(500).send(err)
    } else {
      res.status(200).send(data)
    }
  })
})

//Listener
app.listen(port, () => console.log(`Listening on localhost: ${port}`))
```

Basic React – Exercise 2 – Create reels app

Basic React – Exercise 2 – Create reels app - FE

```
import React, { useState, useEffect } from 'react'
import './App.css';
import Video from './components/Video';
import axios from './components/axios';

function App() {
  const [videos, setVideos] = useState([])

  useEffect(() => {
    async function fetchData() {
      const res = await axios.get("/v2/posts")
      setVideos(res.data)
      return res
    }
    fetchData()
  }, [])

  return (
    <div className="app">
      <div className="app__videos">
        {videos.map(({ url, channel, description, song, likes, shares, messages }) => (
          <Video
            key={url}
            url={url}
            channel={channel}
            description={description}
            song={song}
            likes={likes}
            shares={shares}
            messages={messages}
          />
        ))}
      </div>
    </div>
  );
}

export default App;
```

```
html{
  scroll-snap-type: y mandatory;
}

.app{
  height: 100vh;
  background-color: black;
  display: grid;
  place-items: center;
}

.app__videos{
  position: relative;
  height: 800px;
  border-radius: 20px;
  overflow: scroll;
  width: 80%;
  max-width: 500px;
  scroll-snap-type: y mandatory;
}

.app__videos::-webkit-scrollbar{
  display: none;
}

.app__videos{
  -ms-overflow-style: none;
  scrollbar-width: none;
}
```

Basic React – Exercise 2 – Create reels app - FE

```
import React, { useRef, useState } from 'react'
import './Video.css'
import VideoFooter from './VideoFooter'
import VideoSidebar from './VideoSidebar'

const Video = ({ url, channel, description, song, likes, shares, messages }) => {
  const [playing, setPlaying] = useState(false)
  const videoRef = useRef(null)
